

Sustainability and process efficiency go hand in hand -
COATIFY provides valuable insights for your production process.

Make your coating process more efficient and sustainable

As an information & management platform, COATIFY helps you to optimize the efficiency of your coating line. This benefit has a positive effect on the carbon footprint of the parts produced, the amount of production energy and material, and even on the well-being of your staff.

COATIFY supports higher system availability and productivity increase
by three main factors:

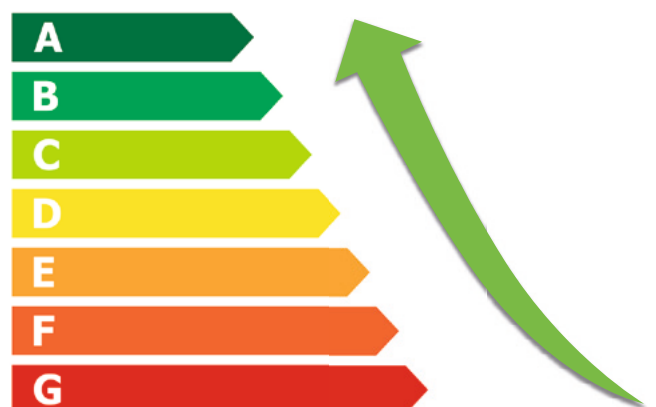

Organizational availability
The capacity of your coating system is fully used.

Technical availability
The system is ready for production.

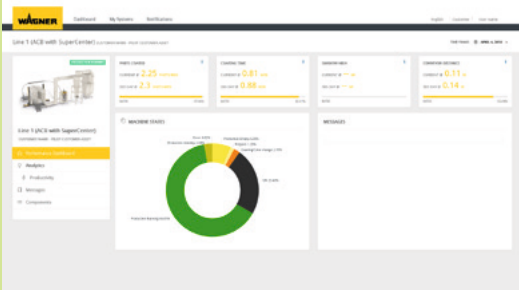

Quality rate
Ideally, your coating system only produces OK parts.

Your production is running effectively

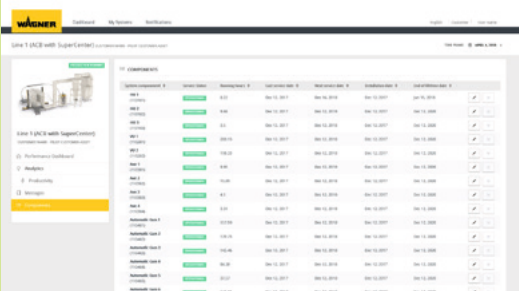

COATIFY supports the organizational availability of your system

Get detailed information on how well your coating system is utilized. COATIFY visualizes:

- The performance of the conveyor and how it was loaded with parts
- Possible optimizations in the production process in case of missing parts, material or inefficiencies
- Information about the color change process, e. g. the duration

An effectively used coating system reduces the carbon footprint of the parts produced, saves resources, energy and money. This benefit supports an environmentally-friendly production.

The coating line is ready for operation

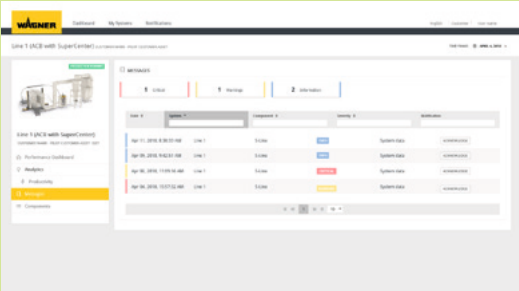

COATIFY supports the technical availability of your system

- COATIFY informs you about important system measures. This supports you to plan preventive maintenance or overhaul activities outside the production time.
- If necessary, a ticket can be sent immediately to the WAGNER service team. Maintenance activities can be carried out before a part is worn out or fails.

In this way, you can plan service measures in good time, and increase your technical availability to save costs and energy.

Coated parts have the right quality

COATIFY supports the quality rate of your production

- If the coated parts show deviations from adjustable limit values, e. g. regarding the layer thickness, you get an early notification or urgent warning.
- Increase your process reliability and transparency.

COATIFY provides recipes and gun parameters that facilitate the coating of new workpieces in a resource-efficient way – even on the first run.

What are you waiting for?

By optimizing all these areas, COATIFY helps you to achieve significant savings – of energy, material and resources. This not only reduces your costs and working hours, but also increases satisfaction in your team.
